- German (B2 Level)

WORK EXPERIENCE

FREE LANCING PROJECTS   **JAN 2024 - NOW**

- Develop services to handle HTTP requests using HttpClient.
- Setting up the routing system using Angular Router.
- State management using NgRx or dedicated services if required.
- Writing unit tests for components and services using Cypress and Karma.
- Reduce pendulum size using techniques such as AOT and Tree Shaking.
- Preparing various environment files (development, production, staging).
- Deploy the application on a server or hosting service such as Firebase, or Heroku.

HM Restaurant Project with Angular 16

- It uses Bootstrap, Angular Material and Sweetalert2 for an attractive design.
- It contains all the pages a restaurant website needs.
- Additional features such as notification systems and external API integrations improve functionality.
- It is characterized by high performance and security thanks to efficient loading times and security measures.

Daily Tasks with Angular 18

- Technical Stack using Directives, Pipes, Services and Dependency Injection
- **Functionality is Add task, Complete task and Task details display**
- **User Interface show a Responsive Design and easy-to-navigate interface.**

Financial tracker built with Vue 3 and composition API

- Add and remove expenses/incomes
- Track balance
- Save data to local storage
- Vue Toastification for notifications

E-commerce project with HTML - CSS - Javascript

My website offers different pages including a shopping page where you can see different sizes and colors of a product and much more.

CRUD - Production Managment System

Our project is a daily task management system. It allows you to easily create, read, update and delete tasks. You can also search by category or title to quickly find the information you need.

Image Search App with Javascript with API
